

RazorThreat Awarded 2007 Industry Innovator by *SC Magazine*
Leading publication: RazorThreat is “completely different”

FOR IMMEDIATE RELEASE – JANUARY 10, 2008 – ROYAL OAK, MICH. -- RazorThreat’s Threat Analysis Console™ (TAC) was recognized as one of *SC Magazines*’s 2007 Industry Innovators. Lauded for its unique approach to predicting and preempting today’s sophisticated cyber attacks, RazorThreat’s TAC provides a completely new approach to securing networks and protecting confidential or business-critical data.

Hailing RazorThreat’s solution as “something completely different,” *SC Magazine*’s Peter Stephenson, PhD, cited the ability of RazorThreat’s TAC to identify “genuine” security risk as a key product differentiator. The TAC combines and enhances the intelligence it gathers from an organization’s entire set of network defense products to formulate a graphical picture of an enterprise’s risk landscape allowing organizations to deploy resources to isolate and defeat impending attacks

“Recognition by *SC Magazine* as an Industry Innovator validates RazorThreat’s development of a product that takes a completely new approach to security,” said RazorThreat CEO Greg Guidice. “Unlike current network security products that identify known threats, RazorThreat’s TAC is able to identify attacks that are unknown and previously completely unpredictable. Additionally, the TAC provides a user-friendly dashboard that highlights key security risks, eliminating the need to review multiple pages of data to find the inevitable breach.”

“By complementing existing security products, including firewalls, IDS/IPS, SIM and SEMs the TAC offers an unparalleled safeguard to critical company and customer data,” Guidice added. “RazorThreat’s TAC maximizes return-on-investment for existing security infrastructure.”

SC Magazine’s review of RazorThreat’s TAC can be accessed by searching “RazorThreat” via www.scmagazineus.com

About RazorThreat

RazorThreat, based in Royal Oak, Mich., has developed a revolutionary new analytics solution that can predict and preempt all known and unknown information security threats. Its patented Threat Analysis Console™ (TAC) protects intellectual capital and personal information in a way that supercedes the capabilities of all existing firewalls, intrusion detection and intrusion prevention software, including all the latest SIM, SEM, and SIEM products. Using patented technology, the TAC affords enterprises and institutions an easy to use, panoramic view of the entire threat landscape facilitating their ability to predict, pinpoint and remediate internal as well as external network-based security threats and vulnerabilities regardless of their source. RazorThreat’s software finds the threats other security systems miss, increasing security effectiveness, compliance and incident response while extending the ROI of already purchased software.
