RAZORTHREAT ANNOUNCES NEW PRODUCT OFFERING

RazorThreat's TAC is now available as a Managed Service or Software-as-a-Service

PONTIAC, MICH. – June 17, 2009 – RazorThreat, creator of the leading edge threat information and risk management software Threat Analysis Console™ (TAC), announced today that they have begun offering a Software-as-a-Service (SaaS) and Managed Service version of their cutting edge TAC product to help companies, universities and government agencies weather the current economic difficulties without exposing their sensitive information to undue risk of being compromised.

"Today CIO's are being confronted with a catch-22 scenario by their senior management who are insisting upon budget and headcount reductions in IT while simultaneously demanding that the CIO reassure them that their computer networks and sensitive information databases are free from the risk of being hacked", said RazorThreat's CEO, Greg Guidice. "We decided to offer these CIO's a means to achieve dramatically enhanced information security without having to acquire expensive software licenses and consulting services".

Operating on the premise that a breach is inevitable the TAC solves the dilemma that current security products present of not being able to correct what they can not detect by analyzing all communication enabling the organization to detect the malware as soon as it initiates thereby eliminating a catastrophic impact from occurring.

In addition to the TAC'S ease of acquisition and deployment the economic benefits of deploying the TAC include leveraging the data produced by current security products increasing their return on investment and freeing up existing personnel to focus on business growth initiatives.

About RazorThreat

RazorThreat, based in Pontiac, Michigan, provides leading edge threat intelligence and risk management software that protects intellectual capital and personal information from all known and yet to be discovered threats that get through existing security software. The TAC enables organizations to easily detect, review and remediate network-based security threats and vulnerabilities regardless of their source, identifying 'true risk' to the enterprise. The primary benefit of RazorThreat's software is it finds the threats other security systems miss increasing the ROI of existing security solutions freeing up existing personnel to focus on other initiatives.
