SHORE MORTGAGE ENLISTS RAZORTHREAT TECHNOLOGY TO MANAGE NETWORK SECURITY

ROYAL OAK, MICH. – September 11, 2007 – RazorThreat today announced Shore Mortgage has implemented its leading edge security information and threat management software, the Threat Analysis Console™ (TAC).

Shore Mortgage, with 350 employees and five offices across the state, specializes in FHA loans and regularly processes financially and personally sensitive information. The Threat Analysis Console™ was implemented there in July 2007.

“Unlike other products we’ve used, the TAC is great because it’s not intrusive; I can see data as it flows and make changes without stopping anything,” said Thomas Nowakowski, Shore’s IT manager, who is using the TAC to improve the security of his network and reengineer his infrastructure. “The TAC gives me a concise view of the traffic on my network and allows me to spot holes and inefficiencies so I can make the necessary tweaks.”

RazorThreat developed the Threat Analysis Console™ to immobilize malicious hacking activities including stealing personal data, credit card and bank account numbers. RazorThreat protects intellectual capital and personal information from worms, viruses and bots that get through existing firewalls, IDS, IPS and virtually all log generating products.

“The TAC is designed to work with existing security solutions, providing a second order analysis and identifying threats other systems miss,” said RazorThreat Founder and CEO Greg Guidice. “I am pleased with the immediate results Shore is seeing; they demonstrate the ease of use and value proposition of our product.”

About RazorThreat

RazorThreat, based in Royal Oak, Michigan, provides leading edge security information and threat management software that protects intellectual capital and personal information from all known and yet to be discovered threats that get through existing firewalls, intrusion detection and intrusion prevention software. The software allows organizations to easily view, interpret, manage and remediate network-based security threats and vulnerabilities regardless of their source, creating trusted communication within and outside of the enterprise. The primary benefit of RazorThreat’s software is it finds the threats other security systems miss increasing the ROI of existing security point solutions in the area of security effectiveness, compliance and incident response.

RazorThreat finds the threats and omissions that your current security solutions miss. For more information, please visit www.razorthreat.com.
