NEW PRODUCT FROM RAZORTHREAT

Posted on 8/2/2007 11:40:32 AM

Royal Oak-based RazorThreat, creator of a security information and threat management software called Threat Analysis Console, Thursday announced a new product for small business, called TAC-One.

RazorThreat says TAC-One provides cost-effective enterprise-class security scaled to suit small IT departments.

"TAC-One brings the power of the Threat Analysis Console to small business, enabling maximum security and network monitoring with minimal effort and at a low total cost of ownership," said Greg Guidice, president and CEO of RazorThreat. "Designed for business with small IT departments, TAC-One is ideally suited for credit unions, regional banks and other businesses that need enterprise-class protection of their clients' personal data but might only have an IT staff of one."

TAC-One is a low-cost system that dramatically increases network security, enhancing the effectiveness of security systems already in place by finding threats they miss. The product also provides explicit security policy reports for regulatory compliance.

TAC-One is priced at \$2,995 and is fully upgradeable to other TAC products. Standard maintenance is also available at \$539.

RazorThreat software protects intellectual capital and personal information from threats that get through existing firewalls, intrusion detection and intrusion prevention software. The software allows organizations to easily view, interpret, manage and remediate network-based security threats and vulnerabilities regardless of their source, creating trusted communication within and outside of the enterprise.

The primary benefit of RazorThreat's software is it finds the threats other security systems miss, increasing the ROI of existing security point solutions in the area of security effectiveness, compliance and incident response.
